Other Useful Information

Diamond rod sharpeners are often misunderstood. Their primary role is not to grind new edges but to **realign and maintain the knife's existing sharpness**. The **chrome coating** improves durability and resistance to corrosion, while the **HRC 62-64 hardness** ensures the rod is harder than most knife steels, allowing it to effectively hone blades.

sharpening removes material to create a new edge.

- **HRC (Hardness Rockwell C):** A scale used to measure the hardness of steels. HRC 62-64 indicates very high hardness suitable for professional honing tools.
- **Hard Chrome Coating:** A surface treatment that provides durability, wear resistance, and corrosion protection.
