Description

Mainly composed of dense boreal forest, the Matawinie region in Quebec is the gateway to the North. It is home for an abundance of black bears, who feed mainly upon wild low-bush blueberry making the region a prime destination for black bear hunting. This model is a favorite for guides and other expert black bear hunters.

maintaining its edge remarkably. Hand guards are crafted from Type 416 stainless steel, this alloy being used for its rigidity and resistance to corrosion. The handles all have ergonomic design features and are sculpted from either cocobolo or Madagascar Ebony, two wood species carefully selected for their hardness, resistance and mostly for their high oil contents which renders our handles stable and virtually impossible to rot. The unique shape of each model's handle has been studied and developed to provide a comfortable and safe grip in hand during each model's specific intended use. The handles are secured to the blade permanently using distinctive decorative rivet pins. Every piece is protected by a full-grain leather sheath, hand-stitched by our craftsmen.
