Description

The new LENSOLUX battue rifle-scope 1- 6 x 24E - now available in the 3rd generation! **NEW**

Due to a completely new development we have reached a new and more modern appearance. The large visual field of around 43 m/100 m is of course still available! And at the highest possible color fidelity and edge sharpness.

This new scope also features brand-new reticle **Lenso-Dot2a** (design protected). It is located in the second image plane and remains constant with the change of magnification. Due to its large **field of view (43 m to 100 m)**, this model is a true specialist for shooting at moving targets, but due to its 6-fold magnification can also be used for single hunt during the day.

Magnification 1-6fold, 24 mm lens diameter and **11-fold dimmable illuminated reticle Lenso-Dot2a** (design protected) **with red dot**. The perfect scope to be used on moving targets, whether in the dim forest or at brightest sunshine out in the fields.

One-piece body with 30 mm diameter, anti-scratch coated ALU, Nitrogen-filled against internal fogging and therefore waterproof. With finely adjustable eyepiece.
