Description

Tent with 100 % self supporting construction. With improved stability and the vestibule already pitched due to the pole construction. The short flat sleeves and hooks helps to pitch fast and effective. Extendable and replaceable anchor points give you more flexibility in rocky or snowy terrain. The apside is a good storage solution for gear and cooking. Helps keep mud out of the inner tent. A rain guidance at the entrance prevents water falling from the flysheet into the tent. Instead rain water is guided away to run off at the sides. The easy-to-use interior buckles extend the vestibule as required. Side ventilations prevents humidity forming inside the tent. The zipper for regulation can be operated from both inside and outside. The Dyneema/Nylon Guy Lines are reflective and a special construction lends additional stability in stormy conditions. Extended guy line webbing transfers the force from stitching to the pole construction.

Salewa tent 'Sierra Leone' - 2 persons

Fly 50D polyester Ripstop, PU coated, W.C. 3.000 mm
