Description

Snigel Fleece Jacket 1.0 - Lightweight Tactical Fleece with Ventilation Zips

Lightweight. Warm. Easy to regulate. The **Snigel Fleece Jacket 1.0** is a fluffy, lightweight tactical fleece built for real-world use in cold conditions. Its smart construction combines two fleece types: a **high-loft "bear" fleece** that traps air for warmth, and a **smoother, thinner fleece under the armpits** to reduce bulk and improve moisture management.

Together with **armpit ventilation zippers**, this design gives excellent thermal regulation across a wide temperature range – from active movement to static cold-weather use. A high collar lined with fluffy fleece adds comfort, while practical details like a full front zip, zippered pockets, an elastic waist cord and durable cuffs make it a reliable everyday midlayer for duty, training and outdoor use.

Key Features

- Dual-fleece construction: warm high-loft fleece + thinner underarm fleece for better moisture control
- Front zipper closure
- Armpit ventilation zippers for fast heat release
- Vent zips designed to match Snigel combat and shell jacket ventilation
- High collar with fluffy fleece inside

FAQ

Is this fleece suitable as a midlayer under a shell jacket? Arm pit ventilation zippers and underarm smooth fleece help manage heat and moisture under a shell.

What makes the construction of the hood compared to a regular fleece? and reduces bulk where you sweat most. Combined with pit zips, it supports fast temperature regulation during movement and stops.

Do the arm pit zippers really help in cold weather? They can quickly make you cold later. Pit zips let you dump heat without removing layers, helping you stay dry and warm.

How should I choose my size? If you wear it as an outer fleece over a base layer, choose your regular size. If you plan to layer it under a thicker insulated jacket, a slightly slimmer fit may work better. (If you send Snigel's size chart or chest measurements, I can format it into a clean table.)

Glossary

- **High-loft fleece:** Fluffy fleece that traps air for insulation and warmth.
- **Pit zips:** Underarm ventilation zippers that allow quick heat release without removing layers.
- **Thermal regulation:** Managing body heat by balancing insulation and ventilation during activity.
- **No Melt No Drip:** A material property designed to reduce melting and dripping behavior under high heat exposure.
