Description

The Quad Release Carrier (QRC) from Warrior Assault Systems is a compact carrier for soft and hard ballistics that enables high and effective protection without affecting the user's movement.

The QRC has a speed clip system on the shoulder straps and the sides, with which can be removed very quickly without having to worry about complicated cables in an emergency. It only takes a few seconds to assemble.

The standard equipment includes a removable MOLLE front flap, which is held in place by two vertical QASM clips and Velcro. This allows the panel to be removed and replaced with a variety of preconfigured panels that are both weapon and mission specific.

The inside of the plate carrier has a 4mm 3D spacer mesh lining that allows heat to evaporate from the body. Coupled with its ability to let the air flow through the mesh, this results in an excellent cooling effect. The 3D spacer network has positive compression functions that significantly improve the comfort of the user.

The carrier is fully adjustable in length and circumference. All threads are resistant to powdery mildew, UV light, water, heat and cold. All materials used have the lowest infrared values (99.8%) and are produced in the USA according to US military specifications.
